

Comparing images histograms from
<http://localhost:8888/notebooks/player-one-split-2501021051.ipynb?>

```
def limb_tour(Camera_ID, whatever,bufArray, gain, exposure, threshold, fav, offsetsumedge,
Contrast_control_X,Brightness_control_V,Lthreshold,u5,SUNRISE_controls,CRTTrade) -> None:
```

Images placed at pixel locations, errors likely due to needed offsets in RA and DEC due to mount. Encoders ordered to help resolve this issue. Seeing : winds flag waving it's entire length but in a gentle motion then the wind speed it between 19-24 mph, from north east.
<https://www.customflagcompany.com/blog/2020/05/15/how-to-determine-wind-speed-with-a-flag/>

Screen capture: added Camera to look at the sky, same as used for meet webcam.
